

BerryVine Survey™

Dynamic Forms, Surveys and Counting for BlackBerry™

BerryVine Survey™ is an amazing GPS enabled product that turns any BlackBerry™ into a universal data collection device for taking surveys, filling in forms and performing systematical counts. This application is ideal for any individual or organization that wants a flexible and very low cost solution for using their mobile devices to gather or track any sort of information, for almost any purpose. Templates can be designed on the BlackBerry using the built-in template designer or using the complimentary web based application. Easy template distribution functionality makes BerryVine Survey easy to use for both single users as well as large groups of users. Collected data becomes available immediately in XML, MS Excel or CSV format and can be distributed efficiently using the BlackBerry's integrated E-mail functions. No additional wireless connectivity is required.

After creating a template, distribute it to as many users you like and let them use it straight away, whenever necessary

Endless possibilities!

Standard functionality for:

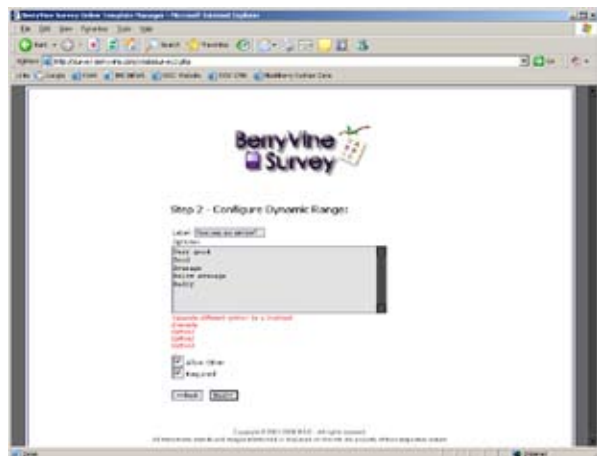

- Large scale surveying operations (e.g. interviews, polls, statistical surveys, etc.)
- Deploying and using user-friendly electronic forms (i.e. for logging important data, keeping track of expenses, collecting customer data, etc.)
- Performing extensive counting operations (e.g. for inventory tasks, collecting agricultural statistics, etc.)
- The extension of all of these functions with GPS coordinate capturing to link any collected dataset to a geographical position

Efficiently use GPS in your templates

BerryVine Survey offers full GPS integration and allows users to capture GPS coordinates and include them in their survey, form or counting results. This function is ideal to relate collected data to a geographical position and use this information for further processing or representation of the collected data. The GPS coordinates are captured in a format that allows them to be used with tools such as Google™ Maps or Microsoft® MapPoint to display the coordinates on maps for graphical representation purposes.

Think, design, distribute and use...

BerryVine Survey makes it easy for users to convert ideas into mobile data gathering applications in just minutes, without having any programming knowledge! With its simple and straightforward interface, any user can start building templates, share them with other users and start using them for the intended purpose.

Users that do not like to create templates on the BlackBerry itself, can use their desktop computer and surf to the web application at <http://survey.berryvine.com> and create and manage their templates online. This service will keep expanding in functionality, and will include data processing features.

Combine BerryVine Survey with a NMEA compatible Bluetooth® GPS antenna for even more uses

Application examples:

- Market information and opinion gathering
- Keeping track of activities of mobile professionals
- Gathering statistical data for production or agricultural environments
- Keeping track of visitor numbers
- Demographic surveys
- Registration of graffiti or vandalism
- Any other task that requires straightforward and fast data collections

BerryVine.com

Quality software for BlackBerry™ devices

Counting made easy!

Counting templates created with BerryVine Survey can be used for performing extensive systematic counts of multiple categories of items. BerryVine Survey turns your BlackBerry in a powerful counting device allowing you to optionally define and use different counting hotkeys on the BlackBerry keyboard for fast incrementation or decrementation of the counters, making it possible to perform on-the-fly counts of multiple categories of items.

Testimonial:

"Using BerryVine Survey allows us to provide our mobile personnel with updated surveys on the road and process their feedback as soon as they are done with their subjects."

- Director of a leading market research firm

Use non-Roman characters

With full UTF-8 support, BerryVine Survey can be used to create templates using non-roman characters. Any user can now work with templates in their native language and provide input with the same character set!

Default features

- Dynamic template design (BlackBerry or web based)
- Generic data gathering
- Dynamic electronic forms
- Dynamic surveying
- Dynamic counting with hotkey support
- GPS coordinate capturing functionality
- E-mail based Template distribution/sharing
- E-mail based data exports/distribution
 - Excel format (.xls, BES only)
 - CSV separated format (semicolon delimited)
 - XML format
- Support for UTF-8 characters (Chinese, Greek, Japanese, etc.)

Receive and process data right away

Once data is collected using the BlackBerry, it can be exported/distributed straight from the device. The application supports three standard data export formats: CSV format (semicolon delimited), XML format (.xml) and MS Excel (.xls - BES only). Optionally BerryVine.com also offers custom secure data exporting services, including HTTPS posting of data, allowing users to post collected data to websites or databases, making any data available immediately for further processing. Contact BerryVine.com if you are interested in this functionality.

Testimonial:

"BerryVine Survey allowed us to virtually eliminate all our paper based forms. Whenever changes occur in our databases, we simply update our templates, distribute them to our users and we are ready to work with the new formats. We never thought this was possible at such low costs!"

- CTO of a large Dutch contractor

See for yourself and try the free 14-day trial version now! Visit www.berryvine.com or bb.berryvine.com with your BlackBerry browser.

Available field types:

- Text field element – for entry of small to large amounts of text
- Multiple selection elements – for selection of multiple values
- Single selection elements – for selection of a single value from a list
- Dynamic range elements – for selecting a value from a range
- Date & time field elements – for entering a date and/or time
- Numerical field elements – for entering a number
- GPS field element – for entering or capturing GPS coordinates
- Counting category element – for easy counting using hotkeys to control the counter
- Various validation checks – for controlling and validating entered data
- Various dynamic auto-text options – to automatically fill in a dynamic default value in a field, that is unique for each user

System requirements

- BlackBerry color or monochrome handheld device
- BlackBerry OS 3.6 or higher
